To solve a problem, we need an algorithm
E.g., sorting

- To solve a problem, we need an algorithm
  - E.g., sorting
  - A priori knowledge is enough

- To solve a problem, we need an algorithm
  - E.g., sorting
  - A priori knowledge is enough
- For some problem, however, we do not have the a priori knowledge
  - E.g., to tell if an email is spam or not
  - The correct answer varies in time and from person to person

- To solve a problem, we need an algorithm
  - E.g., sorting
  - A priori knowledge is enough
- For some problem, however, we do not have the a priori knowledge
  - E.g., to tell if an email is spam or not
  - The correct answer varies in time and from person to person
- Machine learning algorithms use the a posteriori knowledge to solve problems

  - E.g., sorting
  - A priori knowledge is enough
- For some problem, however, we do not have the a priori knowledge
  - E.g., to tell if an email is spam or not
  - The correct answer varies in time and from person to person
- Machine learning algorithms use the a posteriori knowledge to solve problems
  - Learnt from examples (as extra input)

## **Example Data X as Extra Input**

• Unsupervised:

$$\mathbb{X} = \{x^{(i)}\}_{i=1}^N$$
, where  $x^{(i)} \in \mathbb{R}^D$ 

 $\bullet$  E.g.,  $x^{(i)}$  an email

# **Example Data X as Extra Input**

• Unsupervised:

$$\mathbb{X} = \{ \pmb{x}^{(i)} \}_{i=1}^N, \text{ where } \pmb{x}^{(i)} \in \mathbb{R}^D$$

- $\bullet$  E.g.,  $x^{(i)}$  an email
- Supervised:

$$\mathbb{X} = \{(\pmb{x}^{(i)}, \pmb{y}^{(i)})\}_{i=1}^N, \text{ where } \pmb{x}^{(i)} \in \mathbb{R}^D \text{ and } \pmb{y}^{(i)} \in \mathbb{R}^K,$$

 $\bullet$  E.g.,  $y^{(i)} \in \{0,1\}$  a spam label

# General Types of Learning (1/2)

• Supervised learning: learn to predict the labels of future data points

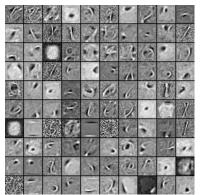

$$X \in \mathbb{R}^{N \times D}$$
: 6 1 9 4 2  $x' \in \mathbb{R}^{D}$ : 5  $y \in \mathbb{R}^{N \times K}$ :  $[e^{(6)}, e^{(1)}, e^{(9)}, e^{(4)}, e^{(2)}]$   $y' \in \mathbb{R}^{K}$ : ?

# General Types of Learning (1/2)

• Supervised learning: learn to predict the labels of future data points

$$X \in \mathbb{R}^{N \times D}$$
: **6 1 9 4 2**  $x' \in \mathbb{R}^{D}$ : **5**  $y \in \mathbb{R}^{N \times K}$ :  $[e^{(6)}, e^{(1)}, e^{(9)}, e^{(4)}, e^{(2)}]$   $y' \in \mathbb{R}^{K}$ : ?

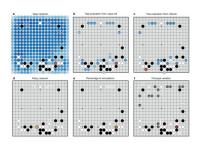

• Unsupervised learning: learn patterns or latent factors in X

# General Types of Learning (2/2)

• Reinforcement learning: learn from "good"/"bad" feedback of actions (instead of correct labels) to maximize the goal

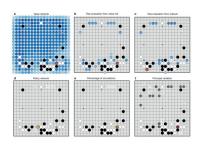

# General Types of Learning (2/2)

 Reinforcement learning: learn from "good"/"bad" feedback of actions (instead of correct labels) to maximize the goal

- AlphaGo [1] is a hybrid of reinforcement learning and supervised learning
  - Supervised learning from the game records
  - Then, reinforcement learning from self-play

① Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration

- ① Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration
  - Split a dataset into the training and testing datasets

- Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration
  - Split a dataset into the training and testing datasets
- 2 Model development
  - ① Assume a **model**  $\{f(\cdot; w)\}$  that is a collection of candidate functions f's (representing posteriori knowledge) we want to discover
    - $\mathbf{1}$  f is assumed to be parametrized by  $\mathbf{w}$

- ① Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration
  - Split a dataset into the training and testing datasets
- 2 Model development
  - ① Assume a **model**  $\{f(\cdot; w)\}$  that is a collection of candidate functions f's (representing posteriori knowledge) we want to discover
    - $\mathbf{1}$  f is assumed to be parametrized by  $\mathbf{w}$
  - ② Define a **cost function**  $C(w; \mathbb{X})$  (or functional  $C[f; \mathbb{X}]$ ) that measures "how good a particular f can explain the training data"

- ① Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration
  - Split a dataset into the training and testing datasets
- 2 Model development
  - ① Assume a **model**  $\{f(\cdot; w)\}$  that is a collection of candidate functions f's (representing posteriori knowledge) we want to discover
  - ② Define a **cost function**  $C(w; \mathbb{X})$  (or functional  $C[f; \mathbb{X}]$ ) that measures "how good a particular f can explain the training data"
- **3 Training**: employ an algorithm that finds the best (or good enough) function  $f^*(\cdot; \mathbf{w}^*)$  in the model that minimizes the cost function

$$\mathbf{w}^* = \arg\min_{\mathbf{w}} C(\mathbf{w}; \mathbb{X})$$

- ① Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration
  - Split a dataset into the training and testing datasets
- 2 Model development
  - ① Assume a **model**  $\{f(\cdot; w)\}$  that is a collection of candidate functions f's (representing posteriori knowledge) we want to discover
  - ② Define a **cost function**  $C(w; \mathbb{X})$  (or functional  $C[f; \mathbb{X}]$ ) that measures "how good a particular f can explain the training data"
- **3 Training**: employ an algorithm that finds the best (or good enough) function  $f^*(\cdot; \mathbf{w}^*)$  in the model that minimizes the cost function

$$w^* = \arg\min_{w} C(w; \mathbb{X})$$

**Testing**: evaluate the performance of the learned  $f^*$  using the testing dataset

- ① Data collection, preprocessing (e.g., integration, cleaning, etc.), and exploration
  - Split a dataset into the training and testing datasets
- 2 Model development
  - ① Assume a **model**  $\{f(\cdot; w)\}$  that is a collection of candidate functions f's (representing posteriori knowledge) we want to discover
    - $\mathbf{1}$  f is assumed to be parametrized by  $\mathbf{w}$
  - ② Define a **cost function**  $C(w; \mathbb{X})$  (or functional  $C[f; \mathbb{X}]$ ) that measures "how good a particular f can explain the training data"
- **3 Training**: employ an algorithm that finds the best (or good enough) function  $f^*(\cdot; w^*)$  in the model that minimizes the cost function

$$\mathbf{w}^* = \arg\min_{\mathbf{w}} C(\mathbf{w}; \mathbb{X})$$

- **4 Testing**: evaluate the performance of the learned  $f^*$  using the testing dataset
- S Apply the model in the real world

- Random split of your past emails and labels
  - **1** Training dataset:  $X = \{(\boldsymbol{x}^{(i)}, y^{(i)})\}_i$
  - **2** Testing dataset:  $\mathbb{X}' = \{(\mathbf{x}'^{(i)}, \mathbf{y}'^{(i)})\}_i$

- Random split of your past emails and labels
  - **1** Training dataset:  $\mathbb{X} = \{(\boldsymbol{x}^{(i)}, y^{(i)})\}_i$
  - 2 Testing dataset:  $\mathbb{X}' = \{(\mathbf{x}'^{(i)}, \mathbf{y}'^{(i)})\}_i$
- 2 Model development
  - **1 Model**:  $\{f : f(x; w) = w^{\top}x\}$

- Random split of your past emails and labels
  - **1** Training dataset:  $\mathbb{X} = \{(\mathbf{x}^{(i)}, \mathbf{y}^{(i)})\}_i$
  - 2 Testing dataset:  $X' = \{(x'^{(i)}, y'^{(i)})\}_i$
- 2 Model development
  - **1** *Model*:  $\{f: f(x; w) = w^{\top}x\}$
  - **2** Cost function:  $C(w; \mathbb{X}) = \Sigma_i 1(w; f(\mathbf{x}^{(i)}; \mathbf{w}) \neq y^{(i)})$

- Random split of your past emails and labels
  - **1** Training dataset:  $\mathbb{X} = \{(x^{(i)}, y^{(i)})\}_i$
  - 2 Testing dataset:  $X' = \{(x'^{(i)}, y'^{(i)})\}_i$
- 2 Model development
  - **1** *Model*:  $\{f: f(x; w) = w^{\top}x\}$
  - **2** Cost function:  $C(w; \mathbb{X}) = \Sigma_i 1(w; f(x^{(i)}; w) \neq y^{(i)})$
- **3** Training: to solve  $w^* = \arg\min_{\mathbf{w}} \Sigma_i 1(\mathbf{w}; f(\mathbf{x}^{(i)}; \mathbf{w}) \neq y^{(i)})$

- Random split of your past emails and labels
  - **1** Training dataset:  $\mathbb{X} = \{(x^{(i)}, y^{(i)})\}_i$
  - 2 Testing dataset:  $X' = \{(x'^{(i)}, y'^{(i)})\}_i$
- 2 Model development
  - **1** *Model*:  $\{f: f(x; w) = w^{\top}x\}$
  - **2** Cost function:  $C(w; \mathbb{X}) = \Sigma_i 1(w; f(x^{(i)}; w) \neq y^{(i)})$
- **3** Training: to solve  $w^* = \arg\min_{\mathbf{w}} \Sigma_i 1(\mathbf{w}; f(\mathbf{x}^{(i)}; \mathbf{w}) \neq y^{(i)})$
- **① Testing**: accuracy  $\frac{1}{|\mathbb{X}'|} \Sigma_i 1(\mathbf{x}'^{(i)}, y'^{(i)}; f(\mathbf{x}'^{(i)}; \mathbf{w}^*) = y'^{(i)})$

- Random split of your past emails and labels
  - **1** Training dataset:  $\mathbb{X} = \{(\boldsymbol{x}^{(i)}, y^{(i)})\}_i$
  - 2 Testing dataset:  $X' = \{(x'^{(i)}, y'^{(i)})\}_i$
- 2 Model development
  - **1** *Model*:  $\{f: f(x; w) = w^{\top}x\}$
  - **2** Cost function:  $C(w; \mathbb{X}) = \Sigma_i 1(w; f(x^{(i)}; w) \neq y^{(i)})$
- **3** Training: to solve  $w^* = \arg\min_{\mathbf{w}} \Sigma_i 1(\mathbf{w}; f(\mathbf{x}^{(i)}; \mathbf{w}) \neq y^{(i)})$
- **① Testing**: accuracy  $\frac{1}{|\mathbb{X}'|} \Sigma_i 1(\mathbf{x}'^{(i)}, y'^{(i)}; f(\mathbf{x}'^{(i)}; \mathbf{w}^*) = y'^{(i)})$
- $\bullet$  Use  $f^*$  to predict the labels of your future emails

- Random split of your past emails and labels
  - **1** Training dataset:  $\mathbb{X} = \{(\boldsymbol{x}^{(i)}, y^{(i)})\}_i$
  - 2 Testing dataset:  $X' = \{(x'^{(i)}, y'^{(i)})\}_i$

  - **2** Cost function:  $C(w; \mathbb{X}) = \Sigma_i 1(w; f(x^{(i)}; w) \neq y^{(i)})$
- **3** Training: to solve  $w^* = \arg\min_{\mathbf{w}} \Sigma_i 1(\mathbf{w}; f(\mathbf{x}^{(i)}; \mathbf{w}) \neq y^{(i)})$
- **Testing**: accuracy  $\frac{1}{|\mathbf{x}'|} \Sigma_i 1(\mathbf{x}'^{(i)}, \mathbf{y}'^{(i)}; f(\mathbf{x}'^{(i)}; \mathbf{w}^*) = \mathbf{y}'^{(i)})$
- **5** Use  $f^*$  to predict the labels of your future emails
  - See Notation

#### **Outline**

- 1 What's Machine Learning?
- 2 What's Deep Learning?
- 3 About this Course...
- 4 FAQ

### **Deep Learning**

• ML where an  $f(\cdot; w)$  has many (deep) layers

$$\hat{\mathbf{y}} = f^{(L)}(\cdots f^{(2)}(f^{(1)}(\mathbf{x}; \mathbf{w}^{(1)}); \mathbf{w}^{(2)}) \cdots ; \mathbf{w}^{(L)})$$

$$\mathbf{x} \longrightarrow f^{(1)}(\cdot; \mathbf{w}^{(1)}) \longrightarrow f^{(2)}(\cdot; \mathbf{w}^{(2)}) \longrightarrow \cdots \qquad f^{(L)}(\cdot; \mathbf{w}^{(L)}) \longrightarrow \hat{\mathbf{y}}$$

### **Deep Learning**

• ML where an  $f(\cdot; w)$  has many (deep) layers

$$\hat{\mathbf{y}} = f^{(L)}(\cdots f^{(2)}(f^{(1)}(\mathbf{x}; \mathbf{w}^{(1)}); \mathbf{w}^{(2)}) \cdots; \mathbf{w}^{(L)})$$

$$\mathbf{x} \longrightarrow f^{(1)}(\cdot; \mathbf{w}^{(1)}) \longrightarrow f^{(2)}(\cdot; \mathbf{w}^{(2)}) \longrightarrow \cdots \qquad f^{(L)}(\cdot; \mathbf{w}^{(L)}) \longrightarrow \hat{\mathbf{y}}$$

- Pros:
  - Learns to pre-process data automatically
  - Learns a complex function (e.g., visual objects to labels)

### **Deep Learning**

• ML where an  $f(\cdot; w)$  has many (deep) layers

$$\hat{\mathbf{y}} = f^{(L)}(\cdots f^{(2)}(f^{(1)}(\mathbf{x}; \mathbf{w}^{(1)}); \mathbf{w}^{(2)}) \cdots; \mathbf{w}^{(L)})$$

$$\mathbf{x} \longrightarrow f^{(1)}(\cdot; \mathbf{w}^{(1)}) \longrightarrow f^{(2)}(\cdot; \mathbf{w}^{(2)}) \longrightarrow \cdots \qquad f^{(L)}(\cdot; \mathbf{w}^{(L)}) \longrightarrow \hat{\mathbf{y}}$$

- Pros:
  - Learns to pre-process data automatically
  - Learns a complex function (e.g., visual objects to labels)
- Cons:
  - Usually needs large data to train a model well
  - High computation costs (at both training and test time)

#### **Outline**

- 1 What's Machine Learning?
- 2 What's Deep Learning?
- 3 About this Course...
- 4 FAQ

### **Target Audience**

- Senior undergraduate and graduate CS students
  - Easy-to-moderate level of theory
  - Coding and engineering (in Python)
  - Clean datasets (small & large)

## **Target Audience**

- Senior undergraduate and graduate CS students
  - Easy-to-moderate level of theory
  - Coding and engineering (in Python)
  - Clean datasets (small & large)
- No prior knowledge about ML is needed

### **Topics Covered**

Supervised, unsupervised learning, and reinforcement learning

#### **Topics Covered**

- Supervised, unsupervised learning, and reinforcement learning
- with structural output:

A man holding a tennis racquet on a tennis court.

A group of young people playing a game of Frisbee

Two pizzas sitting on top of a stove top oven

A man flying through the air while riding a snowboard

- Part 1: math review (2 weeks)
  - Linear algebra
  - Probability & information theory
  - Numerical optimization

- Part 1: math review (2 weeks)
  - Linear algebra
  - Probability & information theory
  - Numerical optimization
- Part 2: machine learning basics (3 weeks)
  - Learning theory
  - Parametric/non-parametric models
  - Experiment design

- Part 1: math review (2 weeks)
  - Linear algebra
  - Probability & information theory
  - Numerical optimization
- Part 2: machine learning basics (3 weeks)
  - Learning theory
  - Parametric/non-parametric models
  - Experiment design
- Part 3: deep supervised learning (6 weeks)
  - Neural Networks (NNs), CNNs, RNNs

- Part 1: math review (2 weeks)
  - Linear algebra
  - Probability & information theory
  - Numerical optimization
- Part 2: machine learning basics (3 weeks)
  - Learning theory
  - Parametric/non-parametric models
  - Experiment design
- Part 3: deep supervised learning (6 weeks)
  - Neural Networks (NNs), CNNs, RNNs
- Part 4: unsupervised learning (2 weeks)
  - Autoencoders, manifold learning, GANs

- Part 1: math review (2 weeks)
  - Linear algebra
  - Probability & information theory
  - Numerical optimization
- Part 2: machine learning basics (3 weeks)
  - Learning theory
  - Parametric/non-parametric models
  - Experiment design
- Part 3: deep supervised learning (6 weeks)
  - Neural Networks (NNs), CNNs, RNNs
- Part 4: unsupervised learning (2 weeks)
  - Autoencoders, manifold learning, GANs
- Part 5: reinforcement learning (3 weeks)
  - Value/gradient policies, action/critics, reinforce RNNs

## **Grading (Tentative)**

- Math quiz: 20%
  - In the next week
  - You have to pass to be able to take this course: >70 or within top-70
- Contests (x 4): 40%
  - At the end of each part
- Assignments: 40%
  - Come with the labs
- Bonus: 6%
  - Math labs (x 4)
  - Optional ML topics (x 2)

#### Classes Info

- Lectures on Tue (2 hours)
  - Concepts & theories
  - with companion videos
- Labs on Thu (1 hour)
  - Implementation (in Python) & engineering topics
- TA time: 1:20pm 3:10pm on Mon at Delta 723
- More info can be found in the course website

#### **Outline**

- 1 What's Machine Learning?
- 2 What's Deep Learning?
- 3 About this Course...
- 4 FAQ

**Q**: Should we team up for the contests?

A: Yes, 2~4 students per team

**Q**: Should we team up for the contests?

A: Yes, 2~4 students per team

Q: Which GPU card should I buy?

A: Nvidia GTX 1060 or above; 1050 Ti (4G RAM) minimal

**Q**: Should we team up for the contests?

A: Yes, 2~4 students per team

Q: Which GPU card should I buy?

A: Nvidia GTX 1060 or above; 1050 Ti (4G RAM) minimal

Q: Do we need to attend the classes?

A: No, as long as you can pass. But you have attendance bonus...

**Q**: Should we team up for the contests?

A: Yes, 2~4 students per team

Q: Which GPU card should I buy?

A: Nvidia GTX 1060 or above; 1050 Ti (4G RAM) minimal

Q: Do we need to attend the classes?

A: No, as long as you can pass. But you have attendance bonus...

Q: Is this a light-loading course or heavy-loading one?

A: Should be very heavy to most students. Please reserve your time

## FAQ (2/2)

**Q**: What's the textbook?

A: No formal textbook. But if you need one, read the Deep Learning book

## FAQ(2/2)

**Q**: What's the textbook?

A: No formal textbook. But if you need one, read the Deep Learning book

Q: Why some sections are marked with "\*" or "\*\*" in the slides?

A: The mark "\*" means "can be skipped for the first time reader," and "\*\*" means "materials for reference only"

#### **TODO**

- Assigned reading:
  - Calculus
  - Get your feet wet with Python
